

Gorillas

Gorillas are large apes. Gorillas are known to be very smart animals.

Gorillas walk on their knuckles. Gorillas live in a small group called a

troop. The gorilla's offspring is called an infant. Gorillas can be

found in the mountains and forests. Gorillas make nests on the

ground or in trees to sleep in. Gorillas like eating bamboo, leafy

plants and sometimes insects. Gorillas can live up to 50 years.

Questions:

1. Where can gorillas be found?
