

A photograph of a rainforest scene. Several large, vertical tree trunks with reddish-brown and greyish-green bark are the central focus. In the foreground, there are large, dark green, deeply lobed leaves, likely from a Monstera plant. The background is filled with dense, lush green foliage, creating a sense of depth and a vibrant, natural environment. The lighting is soft, highlighting the textures of the tree bark and the leaves.

Rainforests

y1

Where are the rainforests in the world?

Key facts :

- Rainforests thrive on every continent except Antarctica. The largest rainforests on Earth surround the Amazon River in South America and the Congo River in Africa.
- **Rainforest Structure**
- Most rainforests are structured in four layers. Each layer has unique characteristics based on differing levels of water, sunlight, and air.
- Rainforests are Earth's oldest living communities with some surviving in their present form for at least 70 million years.
